Digital Payments (UPI) and Financial Inclusion across Indian States

B.Tech Project, Part I

Devansh Gupta

Supervisor: Prof. Rudra Prakash Pradhan (VGSOM)
IIT Kharagpur

November 2026

Motivation

- UPI was launched in 2016 and is operated by NPCI.
- The Jan Dhan account drive began in 2014.
- Policy discussion assumes that digital payments widen access to formal finance and support growth.
- The evidence at state level is thin.
- It is unclear whether higher adoption leads to deeper financial inclusion, or whether states that were already more inclusive adopted faster.

Research questions and hypotheses

- RQ1: Does higher digital payment adoption raise financial inclusion in a state? (H1: yes, positively.)
- RQ2: Does adoption contribute to state-level economic growth after controlling for other drivers? (H2: yes, positively.)
- RQ3: Is the causality bidirectional? (H3: yes; inclusion also encourages adoption.)
- RQ4: Does the effect differ between better-connected and weaker-infrastructure states? (H4: stronger where internet access is higher.)

Literature and gap

- Finance and economic growth.
- Financial inclusion and ICT in Indian states [11, 10].
- Digital payments and UPI [12].
- Methods: panel Granger causality [3]; panel VAR [5, 1].
- **Gap:** no peer-reviewed state-panel study of UPI adoption, financial inclusion and growth with a causality test.

Data availability

- NPCI publishes state-wise UPI data only from April 2025 [8, 4].
- One analysis reports that 27.5% of FY25 UPI volume has no state attribution [6].
- The RBI Financial Inclusion Index is published for India only, not for states [13].
- The PMJDY state-wise statistics are one snapshot (21 October 2026) with no history [2].

PhonePe Pulse as proxy

- PhonePe Pulse commit `257bf38` [9].
- Coverage: 2018Q1 to 2026Q2, 35 state ids.
- Three variables: transaction count, amount (Rs.), registered users.
- PhonePe has about 46% of UPI volume.
- Total transactions: 139.98 million in 2018Q1; 38,664.29 million in 2026Q2.
- Supervisor approval of the proxy is an open item.

Variables and sample

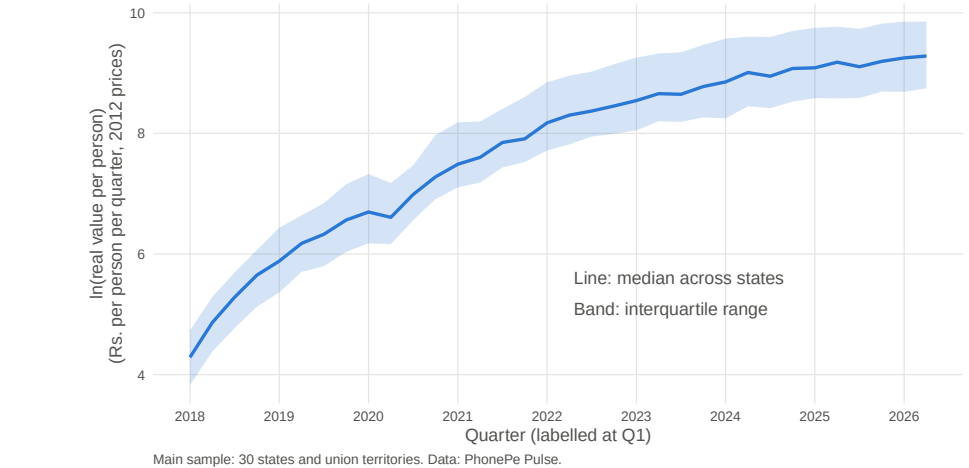

- Main sample: 30 ids (28 states, Delhi, Jammu and Kashmir including Ladakh).
- Panel: 1190 rows, 35 state ids, 34 quarters (2018Q1 to 2026Q2).
- Money values are real (state CPI, base 2012 = 100).

Variable	N	Mean	SD	Min	Max
Transactions per person (count)	1,020	8.35	13.00	0.02	100.30
Real value per person (Rs., 2012 prices)	1,020	6,130.78	8,601.89	17.48	61,997.31
Registered users per 1,000	1,020	274.04	193.56	6.99	943.50
Population (millions)	1,020	45.66	50.37	0.66	243.31
CPI	1,020	169.85	21.64	131.37	223.93

Method plan

- Step 0: description and validation (trends, maps, σ- and β-convergence, PhonePe against NPCI).
- Step 1: series properties (Pesaran CD test, CIPS or IPS, Pedroni cointegration).
- RQ1 and RQ4: fixed and random effects, Hausman test, Driscoll–Kraay standard errors.
- RQ3: Dumitrescu–Hurlin test; panel VAR by GMM.
- RQ2: annual tier, fixed effects and system GMM.
- Results are reported as predictive (Granger) causality, not as causal effects.

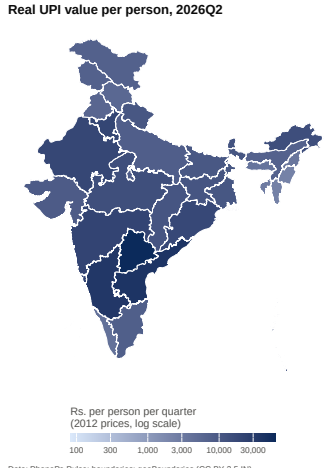

Adoption trend

Median and interquartile range across states of ln real value per person per quarter (Rs., 2012 prices), 2018Q1–2026Q2, main sample. Data: PhonePe Pulse; MoSPI state CPI; NCP 2020.

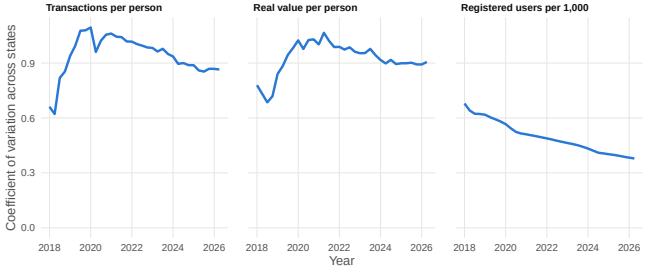

Maps: 2018Q4 and 2026Q2

Real value per person per quarter (Rs., 2012 prices); log colour scale, same scale in both panels. Left: 2018Q4. Right: 2026Q2.

Convergence

Main sample: 30 states and union territories. CV = sd / mean, per quarter. Data: PhonePe Pulse.

σ-convergence: coefficient of variation across states, 2018Q1–2026Q2.

	Real value per person	Transactions per person
Intercept	0.3773	0.5751
	(0.0788)	(0.0211)
ln(initial level)	0.0174	-0.0030
	(0.0138)	(0.0128)
N	30	30
R2	0.054	0.002

β-convergence, N = 30, OLS; standard errors in parentheses.

NPCI validation

	Pearson		Spearman	
Quarter	Count share	Value share	Count share	Value share
2025Q2	0.923	0.923	0.967	0.961
2025Q3	0.905	0.898	0.958	0.959
2025Q4	0.897	0.897	0.954	0.955
2026Q1	0.901	0.897	0.953	0.956
2026Q2	0.901	0.897	0.956	0.954

- 35 ids, 5 quarters (2025Q2 to 2026Q2).
- State shares: Pearson 0.897 to 0.923; Spearman 0.953 to 0.967.
- Per-capita levels: Pearson 0.615 to 0.742; Spearman 0.455 to 0.605.
- NPCI unclassified volume: 0.42 to 0.45 of the national total from June 2025.

Plan for BTP-II

- December to April.
- FI data (RBI BSR, PMJDY, TRAI, NSDP) and quarterly and annual FI indices (PCA; Sarma index as robustness).
- Steps 1 to 3: series properties; RQ1, RQ3, RQ4, RQ2; robustness.
- Thesis; paper (`elsarticle`) after the BTP-II results.
- District-panel extension checked after BTP-I.
- Blocking items: supervisor acceptance of the PhonePe proxy; department BTP rules.
